Nardeen Katchi Vedic Puja.pdf www.Nardeen.com (Tavilal) Category:Indian culture Category:Festivals in India Category:Buddhism in Tamil Nadu Category:Vedas Category:Saivite festivalsQ: How to keep user input information to a variable import java.util.*; import java.util.Scanner; public class Student { public static void main(String[] args) { String username = ""; String password = ""; String class; Scanner input = new Scanner(System.in); System.out.println("Enter your username"); username = input.next(); System.out.println("Enter your password"); password = input.next(); System.out.println("Enter your class"); class = input.next(); } I have this code that prompt the user to input their information such as a username and a password. I have used an array to store the information. What is the best way to get the input information to the variable and hold it? The information that is entered should be stored to the variables and not lost, in order to allow for the user to enter their information again. A: String[] info = new String[3]; info[0] = input.next(); info[1] = input.next(); info[2] = input.next(); Use array. import java.util.*; import java.util.Scanner; String[] info=new String[2]; 82157476af
